The future of Windows Virtualization

**Monolithic vs. Microkernelized**

- **Monolithic hypervisor**
  - Simpler than a modern kernel, but still complex
  - Contains its own drivers model

- **Microkernelized hypervisor**
  - Simple partitioning functionality
  - Increase reliability and minimize TCB
  - No third-party code
  - Drivers run within parent

*Third party marks and brands are the property of their respective owners*
